Krishna Sridhar

AI & Automation Engineer | Exploring Agentic Systems and Workflow Orchestration | Bridging Code and Intelligence
Chicago, Illinois, United States

Summary

The next wave of technology is agentic — systems that think, decide, and act autonomously.

I'm passionate about building AI-driven and agentic workflows that connect systems, automate complex processes, and create intelligent decision-making layers for businesses.

With hands-on experience in web development (Next.js, Angular, Node.js) and a growing focus on AI automation tools like n8n and OpenAI, I enjoy experimenting with how AI agents can replace repetitive operations and augment human capabilities.

Core Interests:

- Agentic AI and automation architecture
- Workflow orchestration using n8n and APIs
- Integrating AI into modern web applications
- Experimenting with real-world business automations (finance, retail, operations)

Let's connect if you're working in AI, agentic systems, or automation — or just exploring how intelligent workflows can reshape the future of work.

Experience

GoWebEz

Frontend Developer

March 2021 - December 2023 (2 years 10 months)

Education

Illinois Institute of Technology

Master's degree, Information Technology · (January 2024 - December 2025)

Dhanalakshmi College of Engineering

B.E, Electrical, Electronics and Communications Engineering · (2017 - 2021)

Subramania Sastriar Higher Secondary School Arni

HSC · (June 2016 - April 2017)
